

OVER 20 YEARS IN
DIGITAL TRANSFORMATION

Company
PROFILE

Conclude

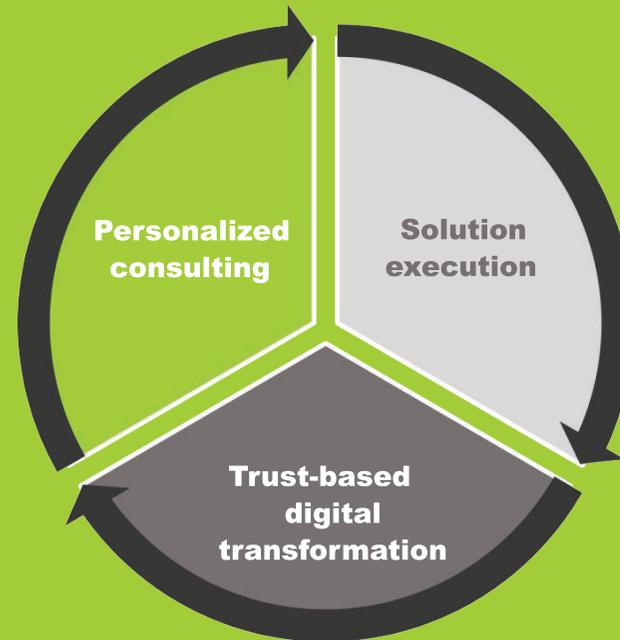

Consider IT done.

About US

Pillars Of Strength

Used by major Financial and Government institutions in South Africa and
Abroad Interacting with more than 4 million end-users

Our VISION & MISSION

Our vision is to be a technology powerhouse that creates game-changing solutions for South Africa and the world

We co-create impactful software solutions by providing clients with the best technology and resources so that they win in their chosen markets

We connect organizations with interesting challenges to people who enjoy solving complex problems

Our TEAM

The Conclude team has expertise in:

- ▶ Electronic Forms
- ▶ Workflow Automation
- ▶ IT Security
- ▶ IT Architecture
- ▶ Project Management
- ▶ Recruitment
- ▶ IT Strategy & Innovation

Digital FORMS & SIGNATURES

Various technologies can be used to capture legally-binding electronic signatures, which are securely attached to electronic forms.

Electronic signature technologies in widespread use include:

- Digital certificates
- Electronic hand-written signatures
- Biometric measures (e.g. thumbprints, voice recordings)
- Combinations of the above

We can provide expert guidance in selecting the most suitable electronic signature technologies for your requirements, balancing weight of evidence against cost and implementation complexity.

Electronic forms are the digital equivalent of paper documents, with the ability to include encoded intelligence to support business rules, such as:

- Offline validation of input field data
- Online validation of data against 3rd party data sources (e.g. credit bureaux)
- Form-level workflow
- Dynamically expanding or contracting based on user inputs
- Pre-population
- Automated submission
- Embedding of electronic signatures

Other **TECH**

Workflow drives the business rules governing the movement and processing of electronic documents, thereby automating inefficient manual processes.

This exposes a wealth of previously untapped, including:

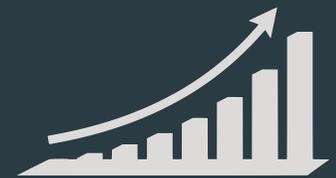

- Management information reports
- **Business intelligence** analyses
- Real-time process performance information
- Automated notifications of critical events (e.g. bottlenecks)

We cater for a variety of technologies to capture legally-binding electronic signatures, which are then securely attached to electronic forms.

Electronic signature technologies include:

- Digital certificates
- Electronic hand-written signatures
- **Biometric measures** (e.g. thumbprints, voice recordings)
- Combinations of the above

We can provide expert guidance in selecting the most suitable electronic signature technologies for your requirements, balancing weight of evidence against cost and implementation complexity

Training & Skills Transfer

Local capability building – Structured programmes designed to transfer skills to local teams for long-term independence.

Workshops & simulations – Hands-on cyber defence labs, red/blue team exercises, and electronic warfare simulations.

Specialist certifications – Cybersecurity, SOC operations, and electronic forensics aligned to global best practice.

Train-the-trainer approach – Ensures sustainable knowledge transfer and rapid scaling of expertise within units.

Capacity building – Blending technical, strategic, and operational training to strengthen national resilience.

People SOLUTIONS

"Human touch" recruitment and resource management:

- ▶ Solution design and development
- ▶ Recruitment
- ▶ Competence assessments
- ▶ Performance management
- ▶ Onboarding and on the job training
- ▶ Payroll
- ▶ Consulting
- ▶ Project management

Conclude **INNOVATE**

We operate in a world defined by an escalating rate of change, and innovation is a **critical capability** for an organization who aims to thrive in the 4IR.

Conclude Innovate consists of a team of product development and technology specialists who help organizations to find **new and creative ways to create value and solve problems.**

Specialities:

- Software & solution development
- Mobile app development
- Project Management

Projects **IMPLEMENTED**

SARS	Electronic forms for SARS's e-Filing
Medical aid	Electronic forms for the capturing and submission of medical aid applications
Vehicle finance	Electronic forms and workflow for a vehicle finance solution including electronic signatures
Home loan originators	Electronic forms for the capturing and submission of home loan applications
Financial services provider	Customer acquisition front-end application
